

# Training of hand hygiene

## Areas of use:

Identificering af hygiejneproblemer, træning af personale og besøgende indenfor:	
• Kitchens	• Hospitals
• Laboratories	• Health sector
• Food production	• Stables
• Schools	

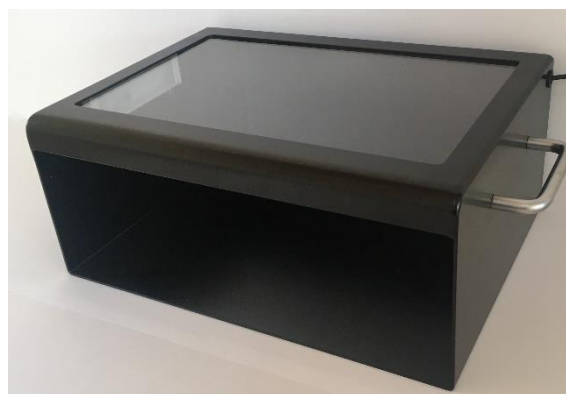

## Training of hand hygiene

Poor hygiene can be the cause of many cases of diseases, both in humans but also in relation to spread of infection/ bacteria between productions.

It is estimated that more than 30% of infections could have been avoided by proper hand hygiene.

### Method:

1. Add 1-2 pumps of the fluorescent hand lotion/ spray and apply as you do it with a normal hand spray.
2. Place your hands in the cabin so that they are fully covered, the entire surface of both hands should be uniformly illuminated. Repeat if necessary, section 1 until the entire surface is uniformly illuminated.
3. Wash your hands thoroughly, dry them and check again in the cabin. The areas still glowing are not adequately washed.
4. Repeat as needed and look for improvements.

### Technical data:

Type	Hand hygiene training screen		
Material	Aluminum	Light source	LED
Dimensions h x w x d	150 x 357 x 251 mm	Weight	2 kg
